About Me

I hold a Bachelor of Arts & Science degree from the University of Otago, majoring in Software Engineering and Music. Since graduating, I have built on that foundation to further develop my technical and professional skills through my work as an Administrator at Wellington Hospital and as a Software Engineer and Musician through my own business, Phillips Music & Tech. Balancing multiple projects across two jobs, music commitments and interests has sharpened my ability to manage competing priorities without compromising on quality. I bring strong creative and analytical thinking to every problem I work on, whether that's designing a software solution for a client or improving a workflow for a busy hospital team. I enjoy collaborating with others, take real ownership of my responsibilities, and am always looking for opportunities to grow.

Education

University of Otago March 2021 – Oct 2024

Bachelor of Arts and Science - Software Engineering and Music

- GPA: 6.8/9.0
- **Coursework:** Cloud Computing Architecture, Applied Project, Enterprise Information Systems Infrastructure, Software Project Management, Web, Databases and Networks

NZ Full Drivers Licence - F,W,T,R endorsements.

Experience

Software Engineer Wellington, NZ
Phillips Music & Tech February 2025 - Present

Independent Software Engineer providing custom software solutions and technical consulting for clients.

Responsibilities include:

- **Software Design & Development:** Design and build web and software applications tailored to client requirements
- **System Maintenance:** Maintain and improve existing software systems and codebases
- **Technical Problem Solving:** Identify and resolve technical issues across frontend and backend components
- **Client Collaboration:** Work with clients to understand requirements and deliver technical solutions
- **Testing & Quality Assurance:** Test, debug, and refine software to ensure reliability and performance
- **Technical Support:** Assist with ongoing technical support for clients
- **DevOps:** Deploy and maintain applications using AWS, Docker, version control with Git and hosting on Vercel and my VPS.

Administrator Wellington, NZ
Te Whatu Ora Health New Zealand – Integrated Operations Centre, February 2025 – Present
Wellington Regional Hospital

- **Manage staffing:** Coordinate placement of nurses, healthcare assistants, and midwives
- **Patient travel assistance:** Oversee travel arrangements for healthcare staff
- **Administrative support:** Maintain systems, support Bureau and Duty Nurse Managers
- **Process improvement:** Optimize workflows and enhance operational efficiency.

Projects

EV Autos

[Website Link](#) 

- Built EV Autos, a full-stack workshop booking platform using TanStack Start, Router, Query, and Form with Zod validation, Clerk authentication, and Neon PostgreSQL/Drizzle ORM, delivering type-safe, end-to-end functionality from UI to database.
- Engineered a concurrency-safe booking system with server-side re-validation of availability and blocked dates, preventing race conditions during simultaneous bookings while keeping client state responsive via TanStack Query caching.
- Designed a protected admin dashboard for managing bookings, enquiries, and feedback, with real-time notifications and date-blocking controls, all implemented through a unified server-function layer for consistent, type-safe domain logic.
- Technologies: PostgreSQL, Tanstack, TailwindCSS, Vercel.

Travel Tracker

- Currently working on a much-needed replacement for a patient travel tracking spreadsheet. This system uses a centralised database with a modernised UI, to make travel data more accessible, reliable, and efficient for patient travel coordinators at Wellington Hospital
- Technologies: Java Springboot, PostgreSQL, Gradle, TailwindCSS, Vite/React.

Phillips Music & Tech Website

[Github Link](#) 

- Website developed for my personal portfolio of work
- Hosted at my own domain phillipsmusictech.co.nz
- Technologies: Vercel, ReactJS + Vite, TailwindCSS.

Southern Paediatrics Website

[Website Link](#) 

- Designed and built a website for a private Paediatric and Neonatology specialist based in Dunedin and Central Otago
- The website is optimised to work on mobile, tablet and desktop platforms
- Technologies: NextJS, TailwindCSS, Vercel.

Review Engine

[GitHub Link](#) 

- Designed a light weight review-collection system to capture customer feedback before it reaches public platforms
- Any reviews rated below three stars are prompted to send an email instead, allowing businesses to address issues directly and privately
- Technologies: Docker, ReactJs, ExpressJs.

Technologies

Languages: Java, SQL, GraphQL, NoSQL, Vue.Js, ReactJS, Python, Django, HTML/CSS, LaTeX, NextJS, Tanstack

Technologies: XCode, VS Code, IntelliJ, PostgreSQL, MySQL, Docker, AWS, Apache Camel, macOS, Windows, Linux, TinaCMS, DNN CMS, Vercel, Git
