About Me

I hold a Bachelor of Arts & Science degree from the University of Otago, majoring in Software Engineering and Music. Since graduating, I have built on that foundation to further develop my technical and professional skills through my work as an Administrator at Wellington Hospital and as a Software Engineer and Musician through my own business, Phillips Music & Tech. Balancing multiple projects across two jobs, music commitments and interests has sharpened my ability to manage competing priorities without compromising on quality. I bring strong creative and analytical thinking to every problem I work on, whether that's designing a software solution for a client or improving a workflow for a busy hospital team. I enjoy collaborating with others, take real ownership of my responsibilities, and am always looking for opportunities to grow.

Technologies

Languages: Java, SQL, GraphQL, NoSQL, Vue.js, ReactJS, Python, Django, HTML/CSS, TailwindCSS, LaTeX, NextJS, Tanstack

Technologies: XCode, VS Code, IntelliJ, PostgreSQL, MySQL, Docker, AWS, Apache Camel, macOS, Windows, Linux, TinaCMS, DNN CMS, Vercel, Git

Projects

EV Autos

[Website Link](#) 

- Built EV Autos, a full-stack workshop booking platform using TanStack Start, Router, Query, and Form with Zod validation, Clerk authentication, and Neon PostgreSQL/Drizzle ORM, delivering type-safe, end-to-end functionality from UI to database.
- Engineered a concurrency-safe booking system with server-side re-validation of availability and blocked dates, preventing race conditions during simultaneous bookings while keeping client state responsive via TanStack Query caching.
- Designed a protected admin dashboard for managing bookings, enquiries, and feedback, with real-time notifications and date-blocking controls, all implemented through a unified server-function layer for consistent, type-safe domain logic.
- Technologies: PostgreSQL, Tanstack, TailwindCSS, Vercel.

Phillips Music & Tech

[Github Link](#) 

- Website developed for my business Phillips Music & Tech, showcasing previous and current projects.
- Integrated with Resend API for email communications.
- Technologies: Tanstack Start, Vercel, TailwindCSS

Southern Paediatrics

[Website Link](#) 

- Designed and built a website for a private Paediatric and Neonatology specialist based in Dunedin and Central Otago
- The website is optimised to work on mobile, tablet and desktop platforms
- Technologies: NextJS, TailwindCSS, Vercel.

Review Engine

[GitHub Link](#) 

- Designed a light weight review-collection system to capture customer feedback before it reaches public platforms
- Any reviews rated below three stars are prompted to send an email instead, allowing businesses to address issues directly and privately
- Technologies: Docker, ReactJs, ExpressJs.

Pantry Pal

[Github Link](#) 

- Worked with a team of five, using SCRUM to develop a pantry assistant. The web application allows users to add ingredients to a virtual pantry and incorporates AI to generate recipes.
- The app runs on iOS, Android and through the web.
- Technologies: Python, Django, ReactJs, SQL, Docker, Swift

Education

University of Otago

March 2021 – Oct 2024

Bachelor of Arts and Science - Software Engineering and Music

- GPA: 6.8/9.0
